## STRUCTURES SMB

En véritables temples de l'escalade et de l'équilibre, les structures SMB en cordages armés et tubes d'acier, favorisent le développement physique et la motricité de l'enfant. Imposantes et sensationnelles, elles permettent l'accueil d'un grand nombre d'enfants.

-  **Choix de 15 couleurs selon nuancier**
-  **Réalisations modulaires (parcours et trampolines)**
-  **Pose libre sans fondations (articles spécifiques)**
-  **10 ans de garantie sur la structure en acier**
-  **Conforme à la norme EN 1176**

### Légende :

Simple, efficaces et robustes, les structures d'escalade à mât central SMB peuvent atteindre jusqu'à 7.8 mètres de hauteur et accueillir jusqu'à 95 enfants. Un classique qui traverse les générations.

Les trampolines SMB se composent d'un cadre en acier galvanisé à chaud et d'un système unique de lamelles composites mises en tension par des ressorts. A la différence des toiles traditionnelles, les surfaces SMB sont très résistantes et inusables.

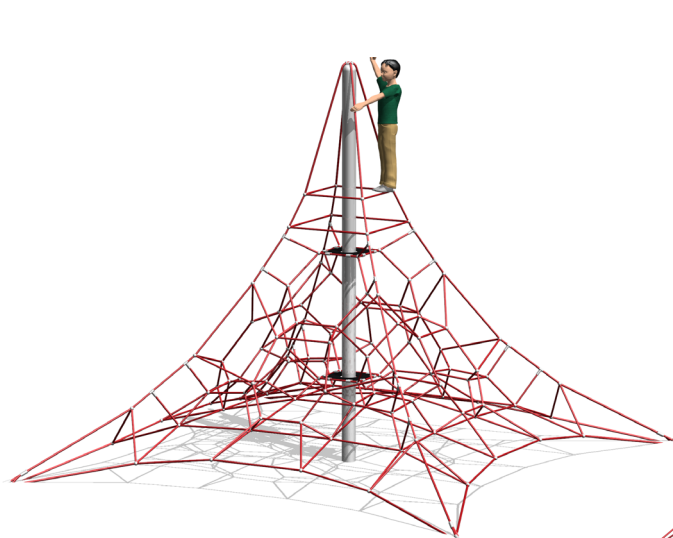

Grâce à sa faible hauteur de chute, la Slackline SMB peut être mise en œuvre sur la pelouse et ne nécessite pas forcément de revêtement amortissant spécifique. La Slackline SMB se décline en une multitude de variations et combinaisons.

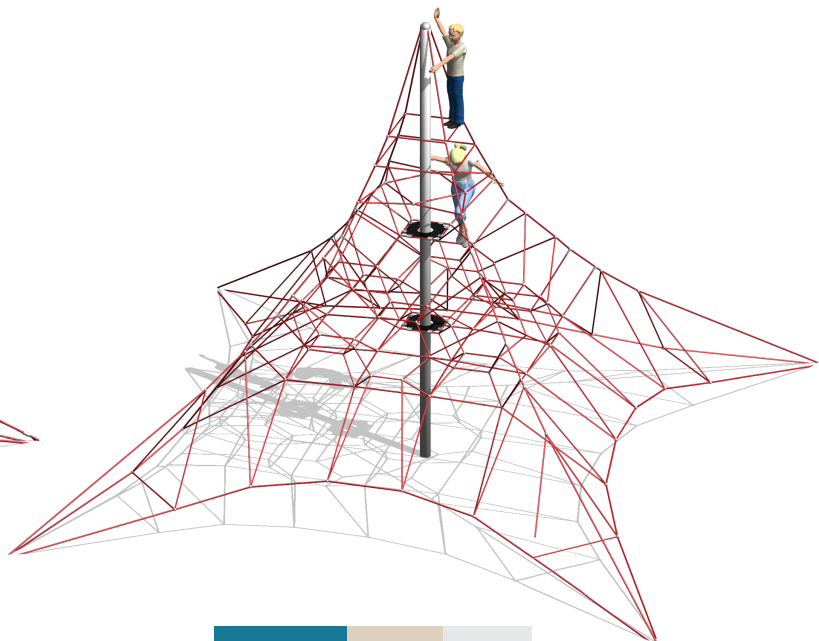

Une structure tubulaire assemblée par le système breveté SECUCOPE®, des cordages de premier choix et des sertisages de précision, font de la pyramide d'escalade SMB un 'Bestseller' indémodable et indétrônable depuis plus de 30 ans.
